OFFICE AUTOMATION

Course Title: Course on Office Automation

Duration: 64

Word -2021

(12 Hrs)

Word 2021: Introduction to Microsoft Word 2021: Embarking on your journey with an overview of Word's interface and its primary tools. | **Crafting & Styling Documents:** From creation to saving, explore document structuring and application of styles for a cohesive look. | **Dynamic Headers & Footers**: Dive into the nuanced world of headers and footers, enhancing document professionalism. | **Textual Mastery:** Techniques for adding, editing, and maneuvering text within your document. | **Advanced Styling:** Harness heading and paragraph styles to ensure consistent document design. | **Visual Enhancements:** Incorporate images, shapes, and apply artistic effects to elevate your document's visual appeal. | **Table Creation & Formatting:** From simple tables to complex grids, understand how to best present data within your document. | **Desktop Publishing with Word:** Transform Word from a simple word processor to a powerful publishing tool. | **Long Document Management:** Tackle extended texts with ease, from academic papers to business reports. | **Mastering Mail Merge:** Streamline mass communications, from event invitations to business letters. | **Proofing & Editing Suite:** Utilize Word's arsenal of tools to ensure document accuracy and coherence. | **Collaborative Revisions:** Understand revision features for seamless document collaborations. | **Harnessing Preset Templates:** Speed up your workflow by leveraging Word's vast library of templates. | **Automating with Macros:** Delve into automation, reducing repetitive tasks and enhancing productivity.

Excel -2021

(12 Hrs)

Excel 2021: Dive into the world of Excel 2021 with an introduction that sets the tone. | Familiarize yourself with the basics of workbooks and worksheets, the building blocks of any Excel project. | Explore the myriad ways to format cells and effectively input data. | **Building Complexity:** Master advanced editing techniques to refine your worksheets. | Unlock the true power of Excel with formulas, functions, and calculations that turn static data into dynamic stories. | **Infuse Creativity:** Learn to enhance your spreadsheets with images, illustrations, and graphics, adding a layer of visual appeal. | Channel your inner designer with our guide to crafting effective charts and diagrams. | **Deep Dives:** Discover the 'What-If Analysis', a feature that empowers you to test and project different outcomes based on varying inputs. | Organize large volumes of data seamlessly with data lists and forms. | Delve into PivotTables and Charts, versatile tools for data representation and analysis. | **Advanced Tactics:** Automate repetitive tasks and custom functions by creating, recording, and executing macros. | Integrate data from non-Excel sources, broadening your dataset. | **Refining Expertise:** Streamline and customize your data presentation with filtering, sorting, and conditional formatting. | Become a formula wizard by employing conditional functions, IF statements, and manipulating date/time and text data. | **Navigating Excel's interface:** Creating, naming, and managing worksheets and workbooks. | Editing and formatting cells, rows, and columns. | Using tables for organized

data management. | Entering and manipulating data. | Applying basic formulas and calculations. | Understanding functions, mathematical operators, and cell references. | Utilizing What-If Analysis. | Sorting and filtering data.

A Deep Dive into Advanced Excel: Pivot Tables: Simplifying Complex Data Analysis | Transform extensive data into clear, actionable insights. | Use Pivot Tables for efficient data summarization and analysis.

Advanced Pivot Table Applications: Master calculated fields, custom timelines, and data slicers. | Extract deeper insights from large datasets.

Data Visualization with Pivot Charts: Turn Pivot Table data into compelling charts for presentations and reports. | Storytelling through data: a key skill in business analytics.

Exploring Business Scenarios with What-If Analyses: Simulate different business scenarios and outcomes. |Make informed decisions based on dynamic data models.

Achieving Targets with Goal Seek and Solver: Set and achieve specific objectives by manipulating variables. | Discover optimal solutions for complex problems.

Comprehensive Data Analysis with the Analysis Tool Pak: Apply advanced statistical and engineering tools to your data. | Uncover deeper insights and solve complex problems efficiently.

Ensuring Accuracy with Data Validation Techniques: Maintain data integrity with validation tools. | Create foolproof data entry processes to minimize errors.

Streamlining Data Integration with Get & Transform: Import, cleanse, and transform data from various sources. | Enhance capability in handling large and diverse datasets.

Excel Auditing and Error Troubleshooting: Identify and resolve Excel errors with advanced auditing techniques. | Ensure the accuracy and reliability of your spreadsheets.

Automating Excel Tasks with Macros: Learn to automate repetitive tasks using Macros. | Introduction to VBA for more complex automation needs.

PowerPoint -2021

(12 Hrs)

PowerPoint 2021: Introduction to Microsoft PowerPoint 2023. | The anatomy of a compelling presentation. | Themes and layouts - giving your slides a professional look. | Text manipulation techniques. | Combining text with visuals like images, graphs, and charts. | Optimal views, layouts, and proofing techniques for an error-free presentation. | Using notes effectively for a flawless delivery. | Integrating images and shapes for a dynamic visual appeal. | Tables in PowerPoint - design, and customization. | Crafting impactful charts. | Delving into SmartArt. | Incorporating multimedia - sound and video. | Seamless transitions and animations for audience engagement. | Master slides for consistent styling. | Final touches: print, share, and export for diverse needs.

MS Access-2021

(12 Hrs)

Microsof t Access 2021: Discovering Microsoft Access: Introduction to Access, its uses, and benefits over other data management tools. | **System Requirements and Setup for MS Access:** Guide to setting up Access, focusing on technical requirements for optimal performance. | **Foundations of Databases:** Basics of database concepts, their structure, and significance in data management. | **Exploring Database Objects:** A look into the various database objects in Access, crucial for handling relational datasets. | **Mastering MS Access Navigation:** Techniques for efficient navigation through the Access interface. | **Building Your First Database:** Step-by-step instructions on creating and managing your first database, including table creation. | **Utilizing Object Views in MS Access:** Understanding various views for enhanced database management. | **Designing Forms in Access:** Crafting user-friendly database applications through form creation. | **Mastery of Form Controls and Styling:** Advanced techniques in form control and customization. | **Deep Dive into Queries:** Exploring queries, their structure, and their role in data analysis. | **Criteria, Operators, and Wildcards in Queries:** Techniques for refining data retrieval using query criteria. | **The Art of Parameter Queries:** Creating interactive queries that prompt user input. | **Creating and Managing Relationships in Access:** Techniques to define and utilize table relationships effectively. | **Database Normalization Explained:** Understanding data organization and efficiency in databases. | **Crafting Calculated Expressions:** Utilizing expressions for calculations and data manipulation. | **Aggregating Data with Queries:** Using aggregate queries for computing statistics. | **Report Generation in Access:** Basics of generating and viewing data reports. | **Advanced Report Design and Customization:** Developing sophisticated report designs tailored to data presentation needs. | **Enhanced Report Formatting Techniques:** Advanced report formatting, including grouping and sorting functionalities. | **Efficient Report Printing and Exporting:** Ensuring high-quality output for Access reports. | **Data Import and Export Mechanics:** Learning data interchange methods for Access. | **Exploring the Latest in Access:** Keeping up with the newest features and updates in Microsoft Access.

Outlook - 2021

(12 Hrs)

Introduction to Microsof t Outlook: Understanding its interface and the potential it holds. | **Configuring Outlook:** Learn the setup process, ensuring that you get the best out of your Outlook experience. | **Email Creation & Sending:** Delve deep into the art of email creation, ensuring each message is clear, concise, and effective. | **Formatting for Impact:** Enhance your emails with various formatting tools, making them more engaging and memorable. | **Decoding Email Headers:** Uncover the importance of email headers and how they can impact on your email's deliverability and reception. | **Organizing Your Email:** Techniques and strategies to keep your inbox clutter-free and organized. | **Address Books & Contacts:** Efficiently manage your contacts, ensuring that no communication slips through the cracks. | **Using Autoresponders:** Set up automated email responses for when you're unavailable, ensuring constant communication. | **Styling Your Emails:** Make your emails stand out with graphics, fonts, colors, and more. | **Calendar & Scheduling:** Utilize Outlook's calendar features, ensuring you never miss a meeting or deadline. | **Task Management:** From setting up tasks to reminders, learn how to manage your workload efficiently. | **Collaboration Features:** Work together, even when you're apart. Dive deep into shared documents, calendars, and more. | **Creating Email Rules:** Stay on top of your inbox by setting rules that sort and

manage your emails automatically. | **Sharing & Alerts:** Dive into shared calendars, setting up alerts, and ensuring you're always in the know.

Projects

(4 Hrs)

Microsoft Word 2021 Projects:

1. **Event Brochure:** Design an event brochure using Word. Include details such as event schedule, speakers, and location. Use features like text boxes, images, and formatting styles.
2. **Research Paper Formatting:** Format a research paper according to specific guidelines (e.g., APA or MLA). Include a table of contents, headers, footers, and citations.

Microsoft PowerPoint 2021 Projects:

1. **Interactive Training Module:** Create an interactive training module on a chosen topic. Use features like hyperlinks, audio narration, and interactive quizzes.
2. **Project Status Dashboard:** Design a project status dashboard using PowerPoint. Include slides for key project metrics, milestones, and timelines.

Microsoft Excel 2021 Projects:

1. **Dynamic Dashboard:** Build a dynamic dashboard using Excel. Use features like PivotTables, charts, and slicers to display and analyze data.
2. **Personal Finance Tracker:** Create a personal finance tracker with Excel. Include categories for income, expenses, and use formulas to calculate savings and budget variances.

Microsoft Outlook 2021 Projects:

1. **Email Organization System:** Develop an email organization system using Outlook. Create folders, rules, and categories to efficiently manage emails.
2. **Task Management System**: Design a task management system within Outlook. Utilize tasks, reminders, and categorization for effective time management.

Microsoft Access 2021 Projects:

1. **Customer Relationship Management (CRM) Database:** Build a CRM database using Access. Include tables for customer information, interactions, and sales data.
2. **Project Tracking Database:** Develop a project tracking database for managing tasks, timelines, and team members. Include forms for data entry.
3. **Library Management System:** Create a database for a library management system. Include tables for books, borrowers, and transactions.
